

FRIGORIFER

Tulcea, Romania

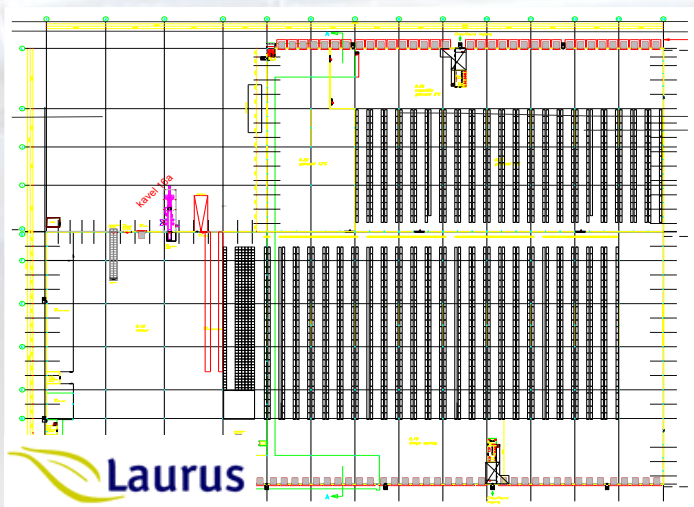

This import/export warehousing and vegetable/meat/seafood processing facility is currently undergoing a major refurbishment. A new refrigeration plant room and new piping, air coolers, wall panels and flooring are being installed. Refrigeration system design, detailed tender documents and contractor interface by Mercury Technologies.

TESCO

England, Scotland

A comprehensive study of the ammonia emergency response procedures was carried out for a series of refrigerated distribution centres across the UK, resulting in a standardised procedure. Also, as part of a safety management programme, all safety systems were reviewed and compared. In addition to this, a detailed study was undertaken to investigate the feasibility of converting the refrigeration systems in other facilities to ammonia.

LAURUS

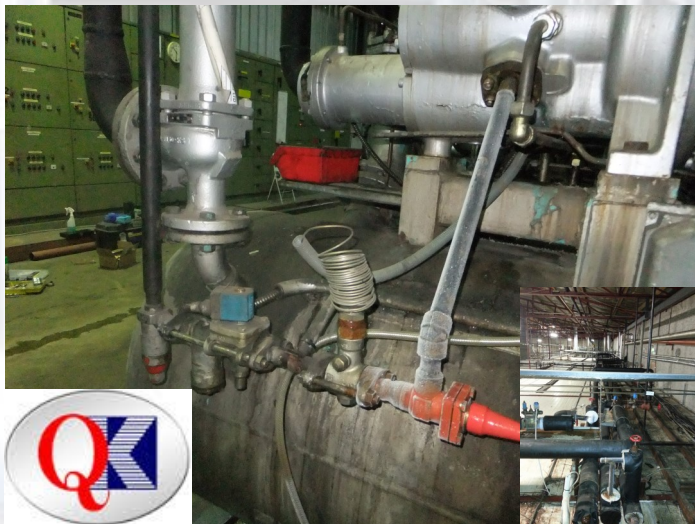

Bleiswijk, Netherlands

Mercury Technologies designed and managed the tendering process for this refrigerated distribution centre owned by the Dutch supermarket chain, Laurus. Work included conceptual design, drafting of drawings and specifications, contractor assessments, tender review and tender award.

GCCA/MCC
Ghana

Working through the Global Cold Chain Alliance (a US organisation facilitating networking for the perishable food industry) for MCC (a US government agency whose mission is to reduce global poverty), Mercury Technologies worked on the ground in Ghana, investigating the pineapple and mango harvesting and distribution network there, with the goal of providing improvements for the small farmer.

QK COLD STORES
United Kingdom & Ireland

Analysis of warehouse complex refrigeration systems. Energy studies, cooling loads, system concept design modifications and equipment assessments were all carried out. Problems addressed included excessive energy usage, condensations, oil cooling issues and over- & under-design.

Mercury Technologies Ltd. are industrial refrigeration and safety specialists with worldwide experience in the Americas, Europe and Africa.
